

libutils: dependencies audit

Date: October 4, 2026 · **Sources:** CMakeLists.txt , tests/CMakeLists.txt , cmake/package/utilsConfig.cmake.in , include/ , src/ , README.md , LICENSE , THIRD_PARTY_NOTICES.md , include/utils/algorithms/LICENSE.md , rpm database, dnf updateinfo , GitHub API

How to read this document

1. Summary.

2. Method: tools and limits.

3. Licenses: one row per dependency.

4. Obligations: what is credited and where.

5. Vulnerabilities.

This is a technical review, **not legal advice**.

1. Summary

Point	Conclusion
License scope	the MIT license only covers libutils' own code: stated in the README, THIRD_PARTY_NOTICES.md and include/utils/algorithms/LICENSE.md
Synced algorithms	c2dmp-hsm and s.o.s are CC BY-NC-SA 4.0 (no commercial use, share-alike), full text in include/utils/algorithms/LICENSE.md , RPM license MIT AND CC-BY-NC-SA-4.0
Vulnerabilities	0 advisory (OpenSSL 3.5.9-1.fc44)
Packaging	libutils-dev requires openssl-devel (RPM)/ libssl-dev (DEB), the public headers include OpenSSL
Third-party licenses	9 dependencies: permissive 2 , permissive-notice 4 , system-runtime 3 ; no copyleft, no unknown license

Low: the synced headers carry no SPDX line; the upstream sync workflows (c2dmp-hsm , s.o.s) run `rm -rf include/utils/algorithms/<algo>` before copying, so the line must be added upstream (the license file is one level above the synced folders for the same reason).

2. Method

Item	Value
Working tree	commit 2b46e19 + the working tree changes
Inventory	deps.py --transitive
Vulnerabilities	vuIns.py (OSV, dnf updateinfo , GitHub advisories), recent window 90 days
Manual	LICENSE , README.md , THIRD_PARTY_NOTICES.md , CPack fields, upstream sync workflow (gh api .../sync.yml)
Limits	Fedora only (the Debian libssl path wasn't checked); libutils-dev-pre 2.13.22 reported by the script is libutils itself (installed), not a dependency

3. Licenses

Dependency	Version	License	Category	Scope	Obligation	Where it is stated
OpenSSL (openssl-libs , openssl-devel)	3.5.9-1.fc44	Apache-2.0	permissive- notice	product (dynamic)	credit when shipped	THIRD_PARTY_NOTICES.md
c2dmp-hsm (synced)	d6fedbb	CC BY-NC-SA 4.0	non- commercial	product (header- only)	attribution, no commercial use, share-alike	include/utils/algorithms/ LICENSE.md , README, notices, RPM license
s.o.s (synced)	e7d2eb5	CC BY-NC-SA 4.0	non- commercial	product (header- only)	same	same
GoogleTest	1.17.0-2.fc44	BSD-3-Clause and Apache-2.0	permissive- notice	test	none	notices
zlib-ng-compat, glibc, libgcc, libstdc++	system	Zlib / LGPL / GPL + runtime exception	permissive / system- runtime	—	none	—

Linking: libutils is a **static** library linking `OpenSSL::SSL` / `OpenSSL::Crypto` `PRIVATE` , re-exported by `find_dependency(OpenSSL REQUIRED)` ; OpenSSL stays a dynamic system library. The synced algorithms are header-only: their code is compiled into every binary that includes them.

4. Obligations

What	Where	Status
libutils MIT license, limited to libutils' own code	<code>LICENSE</code> , README caution	ok
CC BY-NC-SA 4.0 of the algorithms	<code>include/utils/algorithms/LICENSE.md</code> , installed as <code>share/licenses/<package>/LICENSE-algorithms.md</code>	ok
OpenSSL / GoogleTest credits	<code>THIRD_PARTY_NOTICES.md</code> , installed next to <code>LICENSE</code>	ok
RPM license field	<code>MIT AND CC-BY-NC-SA-4.0</code>	ok
SPDX line in the synced headers	upstream sync workflows	to do upstream

5. Vulnerabilities

No advisory for the installed versions (OSV: nothing pinned; dnf: 9 packages checked; GitHub: 3 repositories).
